Pranam Manav Upagade

Project/Product Manager | Product Strategy | Roadmapping | AI-Driven Products | Agile/Scrum
+91-7020458596 | pranamupagade@gmail.com | https://www.linkedin.com/in/pranam-upagade-a5895b230/

Summary

Product Manager with 2+ years of experience owning the product lifecycle from discovery to launch across 8+ web-based products. Strong in product strategy, roadmap planning, user research, backlog prioritization, and cross-functional leadership with engineering, design, and QA. Proven track record of translating business goals into PRDs, user stories, and success metrics, and of improving delivery turnaround by 20. Completed NextLeap's Product Management Fellowship, with hands-on work in KPI definition, A/B testing, funnel analysis, user segmentation, and AI-led product workflows. B.E. in Computer Science, which supports credible technical collaboration with engineering teams, APIs, and data-driven decision making.

Fellowship

Product Management Fellowship Feb 2026 - May 2026
NextLeap *Remote*

- Completed intensive PM fellowship covering product lifecycle, user research, PRDs, and agile execution
- Built end-to-end product case studies including problem discovery, feature prioritization, and roadmap planning.
- Applied data-driven decision making, A/B testing, and KPI tracking in product scenarios
- Gained hands-on experience with AI-led product workflows, APIs, and analytics fundamentals

Experience

Project/Product Manager July 2026 – Present
Exdera *Bangalore, Karnataka*

* Owned the product lifecycle of client-facing design and development products, from discovery and requirement scoping to launch, translating business goals into clear product requirements and success metrics
* Defined and prioritized product roadmaps and backlogs in [Jira / Asana / ClickUp], balancing client needs, technical feasibility, and timelines to ship the highest-impact features first.
* Partnered with designers, developers, and QA to turn user and client needs into user stories and sprint-ready tasks.
* Acted as the voice of the client and the user, gathering feedback, validating assumptions, and iterating on deliverables.
* Led Agile/Scrum ceremonies (sprint planning, stand-ups, retrospectives) and managed scope and risk, keeping products on schedule and improving delivery speed / quality metric.
* Defined product vision, strategy, and roadmap aligned with business goals and customer needs, prioritizing features based on impact, effort, and feasibility.
* Conducted user research, competitor analysis, and market validation to identify pain points and translate them into clear product requirements and user stories.

Project Manager Aug 2024 – Nov 2025
Cojective *Bangalore, Karnataka*

* Led end-to-end delivery of 8+ web-based products (including Rajiv Talreja's portfolio and Quantum Leap platforms), improving project turnaround time by 20% through optimized workflows and execution planning.
* Drove cross-functional collaboration across design, development, and QA teams, ensuring timely delivery while maintaining high-quality UI/UX standards.
* Owned requirement gathering, sprint planning, and stakeholder communication, translating business needs into actionable product requirements and development roadmaps.
* Implemented structured workflows using Jira, Trello, Miro, and Notion, increasing team productivity and improving project visibility and transparency.
* Managed WordPress/Elementor-based product builds, optimizing performance, responsiveness, and user experience across client platforms.
* Provided post-launch support and iterative improvements, ensuring product stability and aligning enhancements with user and business feedback.

Project Co-Ordinator June 2024 to Aug 2024
Dev Story *Chandigarh*

* Supported end-to-end project execution by coordinating across design and development teams, ensuring alignment with timelines and delivery goals.
* Assisted in sprint planning and task prioritization, maintaining Jira boards and improving task visibility and execution efficiency.
* Collaborated with stakeholders including Project Managers and CTOs to clarify requirements, resolve blockers, and streamline communication across teams.
* Contributed to wireframing and UI/UX discussions using Miro and Figma, bridging the gap between design concepts and development execution.
* Strengthened team collaboration and documentation practices using Slack and structured workflows, enabling smoother project lifecycle management.

Project Management Intern Jan 2024 - June 2024
Foruppo *Remote*

* Assisted in end-to-end project coordination, task tracking, and workflow management in a fast-paced startup environment.
* Supported agile project execution by collaborating with cross-functional teams and using tools such as Jira, Trello, and Slack to ensure timely delivery and communication.

Case Study

Swiggy

· Analyzed high volume of customer support queries by mapping business outcomes (cost reduction, CSAT improvement) to product outcomes
· Identified key drivers of support tickets including order delays, poor tracking visibility, and unclear communication through user journey analysis
· Estimated support load and proposed capacity planning model for support agents based on order volume, query rate, and resolution time
· Defined product roadmap focused on reducing query generation, including proactive notifications, improved order tracking, and in-app self-serve support

Peppo

· Built a user segmentation model using behavioral (RFM), demographic, and acquisition data to identify high-LTV cohorts and low-retention segments
· Analyzed drop-offs and survey insights to uncover key churn drivers including limited variety (62 percent) and pricing concerns (31 percent)
· Designed a user research plan combining interviews and funnel analysis to validate hypotheses around motivation, usage patterns, and feature gaps
· Recommended targeted product and growth experiments including personalized recommendations, pricing tests, and expanded recipe variety to improve retention

Spotify

· Identified opportunity to reposition Spotify as a skill-building platform by leveraging user insights around learning through audio (e.g., language improvement, focus habits)
· Designed and scoped a 0→1 MVP using no-code/AI tools (Lovable, Airtable, GPT-based summarization) under strict engineering constraints
· Defined core features including goal setting, structured audio journeys, progress tracking, and behavioral nudges, while deferring complex features like quizzes and creator marketplace
· Established success metrics such as daily active engagement, completion rate of learning journeys, and perception shift from entertainment to utility

Education

Chandigarh University Punjab
Bachelor's of Engineering in Computer Science and Engineering *Aug 2020 - June 2024*

Technical Skills

Product and Business: Product Strategy, Roadmapping, User Research, Feature Prioritization, Stakeholder Management, Communication and Storytelling, Problem Solving, Ownership and Execution
Analytics and AI:AI Product Thinking, LLM Applications and Use Cases, Prompt Engineering, Human-in-the-loop Systems, AI Evaluation and Safety Concepts, Excel (Data Analysis Basics)

Tools and Collaboration: Jira, Trello, Notion, Slack, Miro, Figma
Technical and Development: Git, GitHub, Vercel, Streamlit, Docker, VS Code
Programming and Frameworks: JavaScript, TypeScript, Python, HTML, CSS, React, Next.js
